Tip: the free Temperature Blanket Planner at hookmath.com/temperature-blanket-planner fills in a whole year for your city automatically.

How to use this tracker

- Decide whether you'll use each day's high, low or average temperature, and write it at the top.
- Fill in the color key: 8 to 12 ranges of about 5–10 °F (3–5 °C) each work well.
- Every day, write the temperature, the color number for that range, and tick “Done” when you've made the row.
- One row of double crochet per day makes a very long blanket; many makers use half double crochet, thinner yarn, or one granny square per day, joined at the end.
- February has 29 rows for leap years: leave the last one empty in other years.
